

Optimizing Literature Search Strategies for Multidisciplinary Topics

Thursday, November 8, 2007
1 pm – 5 pm

Finding and staying current with scientific literature on mind-body interactions requires use of information resources from a variety of disciplines. The Pittsburgh Mind-Body Center and the Health Sciences Library System are sponsoring a half-day workshop to help mind-body researchers enhance and expand their literature searching skills.

Presentations will include:

- An overview of the architecture of bibliographic and full-text databases
- Database tools for creating more productive search strategies
- Let the literature come to you: information technology that keeps you up to date

Speakers: Mary Lou Klem, PhD, MLIS
Rebecca Abromitis, MLS
Ester Saghafi, MEd, MLS

This workshop is intended for investigators and advanced research staff. Some prior experience with database searching (MEDLINE or PsycINFO) is strongly recommended.
